

Unbeatable Cost-Benefit Ratio for Single Side Insertion

Komax launches its new Zeta 633/651 fully automatic loaders

The market for automatic blockloaders is a high growth segment. With the new fully automatic Zeta 633/651 for single side insertion, Komax underscores its role as a leader in this area. The new automatic blockloader excels in flexibility and features integrated quality monitoring units, all at a highly attractive price.

Richard Birnstiel Product Manager

Simple, modular solution for single side insertion

Komax's latest innovation in blockloading has a number of exceptional advantages. For one thing, the tried-and-tested Zeta technology is combined here with the advantages of single side insertion. For another, the customer derives immense benefits in production from the integrated setup. It will now be possible to single sided block loading at an unbeatable price using ever-reliable Zeta technology.

Feeding and deposit of housings

Thanks to the flexible and open design, all conventional feed and deposit models can also be offered on the Zeta 633/651. Customer-specific systems are another option.

Quality

Careful attention was paid to the quality of loading and force transfer in the Zeta 633/651 automatic block loader. Komax was able to draw from its years of experience in this sector.

YOUR BENEFITS

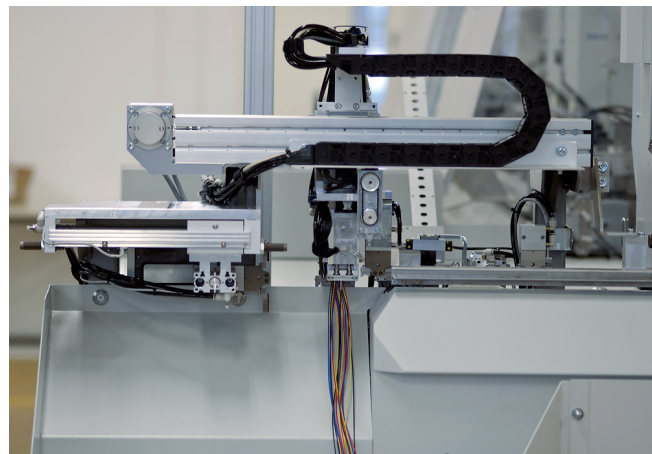

- > Unbeatable cost-benefit ratio
- > Reliable Zeta blockloading technology
- > Integrated quality control
- > Komax TopWin
- > Komax TopNet
- > Optional combination with bundler

Combination with bundler

The Zeta 633/651 fully automatic loader can be combined optionally with a standard Zeta bundler. This combination gives the customer full flexibility. Now both processing possibilities are always available, block loading and cable bundling on one and the same machine without changeover.
