

Success through innovation

Matthias Schulthess and Marc Schürmann

The year 2009 was a major challenge for the wire processing industry. That makes this year's recovery all the more welcome. In spite of the volatile market, Komax continued forging ahead with its product innovations. You as a customer benefit from the new technical features that emerged from these efforts. We look forward to showing you our latest product advances.

In addition to ensuring that our machines meet the technical requirements placed on them, we also always pay close attention to the economic aspects of our products. It is therefore a special pleasure to present to you this fall the new Gamma 263 fully automatic crimping machine. It combines both elements perfectly. Our motto in developing this fully automatic crimping machine was «SMART Crimper». In this case, SMART is also an acronym standing for Simple, Maintenance friendly, Affordable, Reliable and Top Quality.

In addition, Komax launched a considerable number of new products and further advances. Ergonomics are improved thanks to a touch screen and a seal module for the latest machine generations. We will also unveil a small-font marker from the new inkjet generation.

These are just a few of our innovations. For information on all the other ones, please visit our In-house Show or check out the following pages.

*Marc Schürmann, Head of Sales
Matthias Schulthess, Head of Marketing*
