

Kappa 3xx automatic cutting and stripping machines

Wire processing the convenient and comfortable way

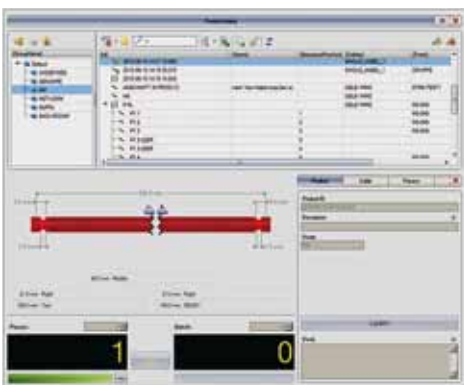

The goal of any wire processor is to ensure the seamless transfer of customer data all the way to the appropriate production system. Komax has various cutting and stripping solutions to offer, based on a Kappa production line. All of them can be integrated fully into the customer environment. TopWin Kappa, the completely revised PC control software, provides the machine operator with a high degree of comfort and control over the imported cut lists. If the Kappa machine is operated without TopWin, data can now be imported directly via USB sticks.

TopWin Kappa 11.1 – PC control software

With the help of TopWin Kappa, you can conveniently produce products, cables and jobs for the Kappa automatic production machine on a PC and load them into the machine for subsequent production. With the 11.1 version, the software was optimized in close cooperation with customers for even greater ease of use. The range of functions was also increased.

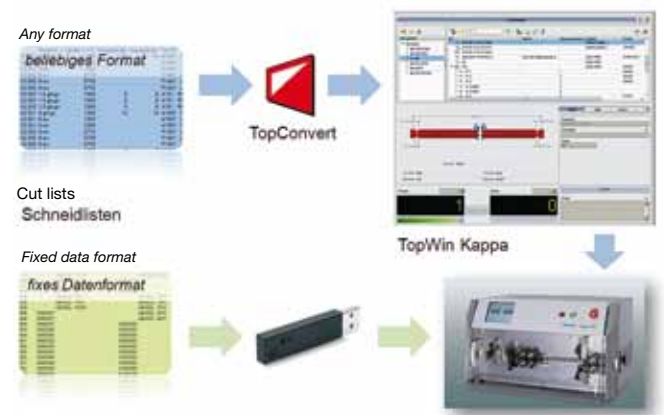

TopWin for Kappa

YOUR BENEFITS

- > Major items of information visible at a glance
- > Full support for parts lists and sequences
- > New, simplified product editor
- > Convenient navigation within groups and parts lists/sequences
- > Simpler handling of printed texts

Importing wire and product data via USB memory sticks

With the new TopTouch software, you can now also load wire and production data directly in all Kappa 3xx machines. Moreover, using simple Excel Format (CSV) and USB memory sticks, you can now transfer production data such as wire type, cross section, wire length, stripping positions and much more directly into the machine.

YOUR BENEFITS

- > Very user friendly thanks to simple data handling
- > Open data format for flexible data management
- > Variety of data import methods
